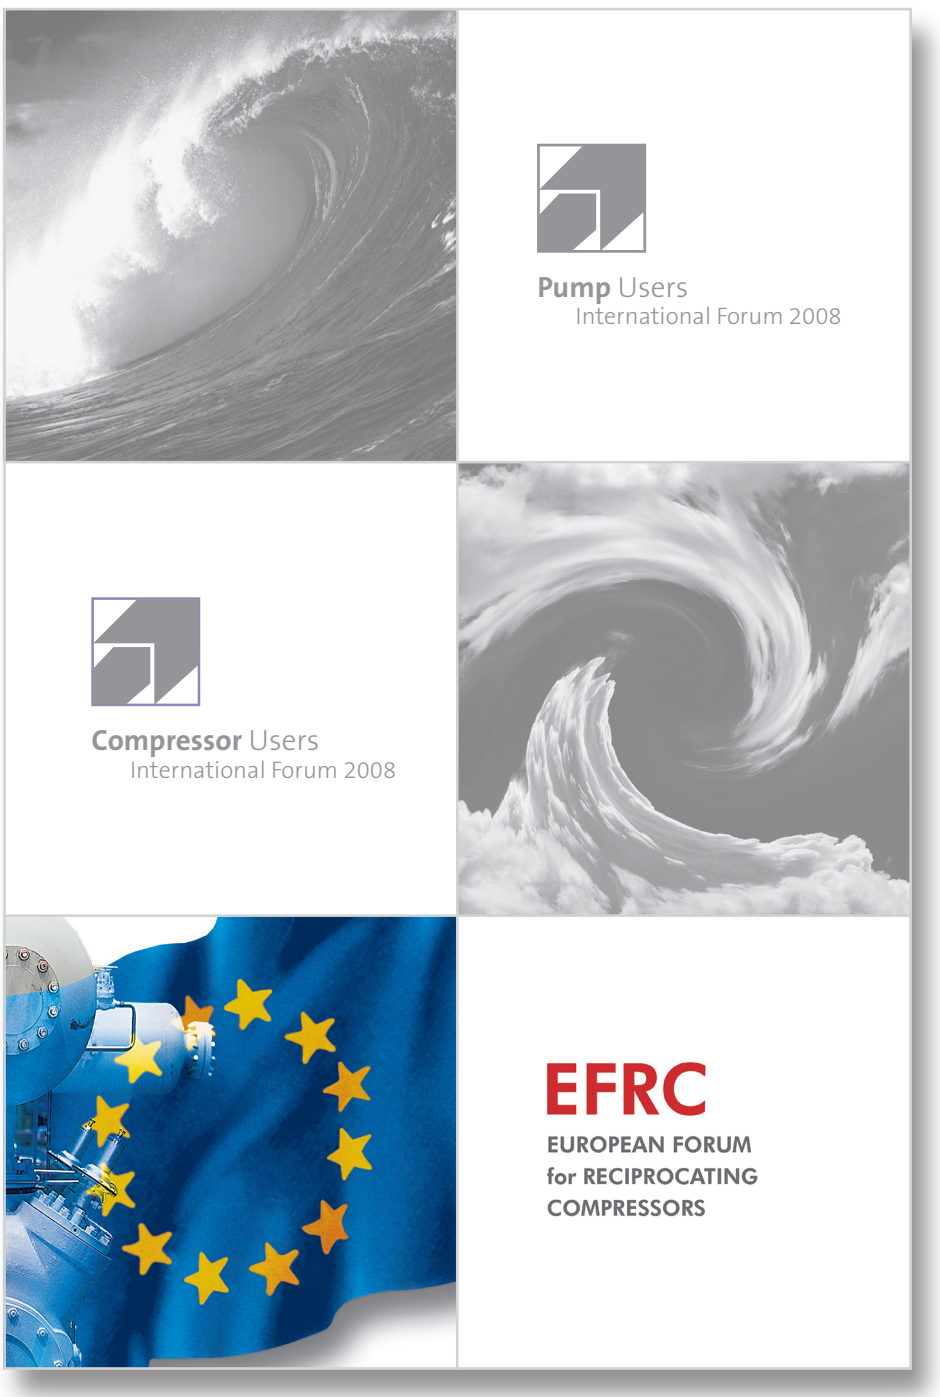
International Rotating Equipment Conference

6th EFRC Conference



PROCEEDINGS

Düsseldorf, 28th–29th October 2008

Content

Adverts		2
Session 31:	Design & Engineering I	8
Session 32:	Pulsations & Vibrations I	22
Session 33:	Design & Engineering II	46
Session 34:	Fundamentals	76
Session 35:	Design & Engineering III	105
Session 36:	Operations & Maintenance I	133
Session 37:	EFRC Meeting	152
Session 38:	Valves	174
Session 39:	Operations & Maintenance II	198
Session 40:	Design & Engineering IV	214
Session 41:	Pulsations & Vibrations II	236

Session 31: Design and Engineering I

31-1 Lau G. M. Koop
The erection of very heavy 4- and 6-cylinder reciprocating compressors 9

31-2 Ulrich Dirkmann / Burkhard Lenth / Joachim Wermeling
Use of modern control systems in compressor stations 17

Session 32: Pulsations & Vibrations I

32-1 Erik Slis / Leonhard van Lier / Jan Smeulers
3D acoustic modelling in PULSIM for high frequency dynamics 23

32-2 Shelly Greenfield
Optimizing the pulsation control solution 28

32-3 Klaus Brun / Edgar B. Bowles / Danny M. Deffenbaugh
Development of a transient fluid dynamic solver for compression system pulsation analysis 34

Session 33: Design & Engineering II

33-1 Armin Gerland / Volker Peterseim / Georg Samland
Reliable sealing technology for high pressure CO_2 applications 47

33-2 Stefan Jarosch / Steffen Schramm / Marcus Zeibe
The piston rod – an essential component on reciprocating compressors including crosshead – design, calculation and requirements concerning surface
Valve cages and covers – design and evaluation in respect of ease of maintenance 53

33-3 Krunoslav Hercigonja / Gerhard Braun
ATEX: from the perspective of a compressor manufacturer 66

Session 34: Fundamentals

34-1 Stefan Tuma
Taking the guesswork out of PTFE seals 77

34-2 Rainer Kurz / Klaus Brun
Efficiency definition and load management for reciprocation and centrifugal compressors 86

34-3 Herbert Kopecek / Helge Klockow / Michael Schmitz / Simone Pratesi / Carlo Mazzali / Paolo Battagli
Development and test of an electrical valve actuator for reverse flow capacity control of reciprocating compressors 98

Session 35: Design & Engineering III

35-1 Klaus Hoff / Egidius Steinbusch
Hydrodynamic calculation method for crosshead pin bearings especially under less rod load reversal loading 106

35-2 Ernst Huttar / Vassilaq Kacani / Thomas Heumesser
Simulation of reciprocating compressor start-up 116

35-3 Riccardo Traversari / Marco Faretra / Marcello Pellicciari
Virtual prototyping technique applied to the design of a crankmechanism of a process reciprocating compressor 123

Session 36: Operations & Maintenance I

36-2 Harry Lankenau / Roland Schuhmann
Compressor Valves – How much do they contribute to operational noise and vibrations? 134

36-3 Andreas Gottmer
Comparison of calculated and measured torsional vibrations on recip cranks with evaluation of mechanical compressor efficiency 141

Session 37: EFRC Meeting

37-1 Leonhard Keller / Peter Steinrück
EFRC – the international platform for reciprocating compressor manufacturers and users 153

37-2 Siegmund V. Cierniak
Educating reciprocating compressor engineers at the EFRC 156

37-3 André Eijk
EFRC Guideline for vibrations in reciprocating compressor systems 162

Session 38: Valves

38-1 Kevin Durham / Tom Dunn
Development of elastomeric materials in reciprocating compressor valves: aerodynamics and springless valve designs 175

38-2 Massimo Schiavone / Andrea Raggi
Electromechanical actuator for reciprocating compressors stepless control 180

38-3 Bernhard Spiegl / Thomas Kriechbaum / Peter Steinrück
Material design for valve applications 188

Session 39: Operations & Maintenance II

39-1 Marcel Hempen / Bernd Wagner
Case study of a bearing failure analysis 199

39-3 Roland Schuhmann / Christian Prinz
Machinery protection for recips: experience and outlook 207

Session 40: Design & Engineering IV

40-1 Horst Becker / Werner Schulte
Liquefaction process with reciprocating compressors in a small LNG peak shaving plant 215

40-2 Rob Vieverich / Gerard van Bergen
Technical and economical aspects in the evaluation for upgrading a reciprocating compressor installation 222

40-3 Steffen Gast / Knut Sponner / Jürgen Ilgner
The re-launch of the BORSIG BX series: examples drawn from the options and possibilities in the technical implementation of, and experiences during, the re-activation of long-standing design documents 228

Session 41: Pulsations & Vibrations II

41-2 Eugene “Buddy” Broerman / Robert McKee / Christine Scrivner / Gary Bourn
Advancement in pulsation control for reciprocating comrpessors 237

41-3 Brain Howes / Tony King / David Pearsall
Torsional vibration case study highlights design considerations 244
