International Rotating Equipment Conference Düsseldorf 2016: Excellent response again and new business models thanks to the digital revolution

Frankfurt, 14 September 2016 – “We are proud that the response to the joint conference has been excellent again this year despite of the difficult market conditions in some end-use industries”, reported Dr. Sönke Brodersen at the press conference held on the occasion of the International Rotating Equipment Conference in the Congress Center in Düsseldorf, Germany. The Chairman of the VDMA Pumps + Systems Association was pleased to be able to welcome around 750 participants from more than 28 countries, and explained the range of services available for participants of the conference combining lectures, exhibition and for the first time technical updates from companies. He also listed the apparent values for participants, among them expert knowledge for users as well as high value training including training certificates. Brodersen confirmed the figure forecast given months ago of 3 per cent decrease in turnover for pumps + systems in 2016. According to Brodersen, the industry cannot give any reliable forecasts for 2017 due to increased volatile surroundings.

“A core task to be solved and central discussion point between manufacturer and end-user is, if and to which extent a manufacturer will be able to look into an end-user’s machine in operation” emphasized Alexander Peters, Chairman of the VDMA Compressors, Compressed Air and Vacuum Technology Association, commenting on the plenary lecture topic digitalization in the process industry. Peters expects a turnover for compressors, compressed air and vacuum 2016 at the 2015 level.

„We are continually developing our International Rotating Equipment Conference further. This year, for the first time, there will be technical updates from companies and electronic vote on the awards”, informs Christoph Singrün, Managing Director at VDMA Pumps + Systems as well as Compressors, Compressed Air and Vacuum Technology.

The „3rd International Rotating Equipment Conference – Pumps, Compressors and Vacuum Technology“ is organized by VDMA Pumps + Systems as well as VDMA Compressors, Compressed Air and Vacuum Technology. It will take place in the Congress Center of Düsseldorf, Germany, from 14 to 15 September 2016, with three forums under one roof. These are the Pump Users International Forum, the Compressor Users International Forum and the EFRC (European Forum for Reciprocating Compressors) conference.
